1.Introduction

1.1 Background and Usage

Across Sri Lanka, many communities continue to face deep-rooted social and economic challenges, including poverty, limited access to healthcare, unequal educational opportunities, and financial instability. Although charitable donations and welfare initiatives exist, many traditional systems often lack the transparency, accountability, and efficiency needed to ensure that support reaches the right people at the right time. As a result, a significant gap remains between those who are willing to help and those who urgently need assistance.

Project Hope is designed to bridge this gap through a trusted digital platform that directly connects donors with individuals and families in need. Unlike many conventional charity models that rely heavily on intermediaries and lengthy bureaucratic processes, Project Hope promotes a faster, more transparent, and more impactful donation experience. By leveraging technology, the platform enables verified requests, secure contributions, and clear tracking of assistance, ensuring that generosity creates meaningful and measurable change across Sri Lanka.

1.2 Project-Client Background

Project Hope is being developed from the ground up as an academic software engineering project by a team of undergraduate students at the **University of Sri Jayewardenepura**. The platform is designed to serve a wide range of stakeholders, including individual donors, non-governmental organizations (NGOs), corporate social responsibility (CSR) initiatives, and most importantly, individuals and families who require urgent support.

The primary beneficiaries of the system are underprivileged individuals and households experiencing severe financial hardship, whose needs will be verified through responsible documentation and validation processes. Project Hope aims to become more than just a donation platform—it seeks to create a purpose-driven digital ecosystem where technology and compassion work together. By transforming acts of generosity into real, measurable outcomes, the platform aspires to deliver sustainable social impact and meaningful change throughout Sri Lanka.

1.3 Motivation of the Project

At present, Sri Lanka lacks a secure and reliable digital platform where donors can directly connect with verified individuals and families who genuinely need assistance. Many traditional charity systems often involve administrative overhead, limited verification processes, and insufficient transparency, which can leave donors uncertain about whether their contributions are reaching the intended recipients. This creates hesitation among potential donors and reduces the overall effectiveness of charitable support.

Project Hope is being developed to address these critical challenges by creating a transparent, sustainable, and human-centered platform that removes barriers between goodwill and meaningful action. The system is designed to build trust between donors and recipients while ensuring that support is delivered efficiently and responsibly.

The foundation of Project Hope is built upon several core values:

- **Transparency** – Ensuring every donation is made with confidence by featuring only verified recipient profiles and clear donation processes.
- **Equality** – Providing fair and open opportunities for all deserving individuals and families to be seen, heard, and supported.
- **Intentional Giving** – Enabling donors to make informed decisions by browsing authentic stories, real needs, and validated requests.
- **Trust** – Creating a credible platform centered on authenticity, integrity, respect, and dignity in every interaction.

By bridging compassion with genuine need, Project Hope aims not only to provide relief for immediate hardships, but also to encourage a more responsible, connected, and sustainable culture of giving throughout Sri Lanka.

1.4 Objective of the Project

The main purpose of **Project Hope** is to design, develop, and deploy a secure, reliable, and user-friendly web platform that connects donors with verified individuals and families in need of assistance. The system aims to use technology as a bridge between compassion and genuine social need, ensuring that support can be provided in a transparent, responsible, and meaningful manner.

The platform will be developed to achieve the following key objectives:

- **Collect and present recipient profiles** based on submitted requests supported by proper verification documents, ensuring authenticity and credibility.
- **Allow donors to browse, search, and filter profiles** according to categories such as financial hardship, education, healthcare, nutrition, housing, and level of urgency.
- **Enable informed giving decisions** by allowing donors to understand real stories, verified needs, and the background of recipients before offering assistance.
- **Act as a facilitation tool for direct human connection**, encouraging communication between donors and recipients rather than functioning solely as a donation transfer system.
- **Maintain high standards of security, privacy, and trust** across all user interactions through authentication, data protection, and administrative monitoring.
- **Promote fairness and equal opportunity** by giving deserving individuals from all parts of Sri Lanka a chance to receive visibility and support.
- **Encourage long-term social responsibility** by building a culture of transparent and accountable giving.

Upon completion, the system is expected to include the following major features:

- ❖ A fully responsive web platform accessible through desktop, tablet, and mobile devices.
- ❖ Secure user registration and login for donors, recipients, and administrators.
- ❖ An administrative dashboard for recipient verification, content moderation, user management, and report monitoring.
- ❖ Separate donor and recipient dashboards for managing profiles, requests, communication, and activities.
- ❖ A secure communication channel to initiate direct donor-to-recipient connections.
- ❖ Advanced search and filtering options to help donors quickly identify verified cases based on need type or urgency.
- ❖ Notification and status update features for profile approvals, requests, and communication.
- ❖ A transparent profile management system that allows recipients to update their information when necessary.
- ❖ Data reporting and analytics tools to evaluate platform usage and social impact.

Ultimately, Project Hope seeks to become more than just a software solution—it aims to create a trusted digital ecosystem where generosity can be transformed into real and measurable change throughout Sri Lanka.

1.5 Scope

1.5.1 Functional Scope

The proposed solution will consist of the following core functional modules, each designed to ensure transparency, accountability, and efficient management of assistance requests within the **Project Hope** platform.

i) User Management Module

This module manages user registration, authentication, and profile access for all authorized users of the system.

- Registration and secure login for donors, recipients, verifiers, finance managers, and administrators.
- Role-based authentication and access permissions.
- Profile creation, editing, and account management.
- Password recovery and account security features.
- Session control and secure data access.

ii) Recipient Module

This module is designed for individuals or families requesting assistance.

- Submit requests for financial, medical, educational, or nutritional support.
- Upload relevant supporting documents for verification.
- Track request progress and approval status in real time.
- Respond to inquiries from donors through the platform.
- Update personal information and request details when required.
- Receive notifications regarding request status and support received.

iii) Donor Module

This module enables donors to discover genuine needs and provide assistance confidently.

- Browse verified recipient requests approved by the verification process.
- Search and filter requests by category, urgency, or location.
- View recipient profiles and validated needs.
- Contact recipients through secure communication channels.
- Save profiles or requests for future outreach.

- Track donation history and supported cases.

iv) Admin Module

This module is responsible only for managing internal staff roles and system administration.

- Create, update, and delete verifier accounts.
- Create, update, and delete finance manager accounts.
- Manage administrator-level settings and access control.
- Monitor internal staff activities and system operations.
- Generate administrative reports and maintain platform governance.

v) Verifier Module

This module is responsible for managing recipients and validating all assistance requests.

- Review recipient registrations and submitted requests.
- Examine uploaded documents based on platform standards and eligibility criteria.
- Approve or reject recipient requests after verification.
- Request additional documents or corrections if needed.
- Manage recipient records and maintain verification history.
- Publish approved requests for donors to view.
- Forward approved funding requests to finance managers when necessary.

vi) Finance Manager Module

This module manages financial operations and ensures proper fund allocation.

- Review approved requests forwarded through the verification process.
- Manage receipt of donated funds.
- Distribute funds to the correct and eligible recipients according to approved requests.
- Prioritize urgent or high-need cases where necessary.
- Maintain transaction records and funding history.
- Generate financial summaries, audit trails, and accountability reports.

Together, these six modules form a secure and trustworthy ecosystem where donors can support verified needs, recipients can request help with

dignity, verifiers ensure fairness, finance managers handle funds responsibly, and administrators manage internal operations efficiently.

1.5.2. Non-functional Scope

- Responsive web design compatible with desktop, tablet, and mobile devices.
- Secure storage and management of data using PHP and MySQL based technologies.
- Clean, intuitive, and user-friendly interface for all categories of users.
- Role-based authentication and secure access control for different user types.
- Reliable system performance with optimized loading and smooth navigation.
- Scalable architecture capable of supporting at least 1,000 concurrent users.
- Efficient database structure for fast data retrieval and request processing.
- High availability and maintainability for long-term system operation.
- Secure communication channels to protect user privacy and sensitive information.
- Flexible system design that allows future enhancements and feature expansion.

2. Analysis

2.1 Requirement Gathering Methods

- To ensure that Project Hope is designed in alignment with real social needs and user expectations, the development team carried out a structured requirement-gathering process. Since the system focuses on connecting donors with verified individuals and families in need, understanding existing donation practices and challenges was essential.
- The following methods were used to collect requirements:

2.1.1 Observation

- The primary method of requirement gathering was observation of existing charity and donation-related platforms, both digital and traditional. The team studied how current systems manage donations, present beneficiary information, and handle trust between donors and recipients.

- Through this observation, it was identified that many existing platforms lack strong verification mechanisms, transparent storytelling, and direct connection between donors and recipients. In addition, users often face difficulties in understanding whether their contributions reach the correct beneficiaries, which reduces trust and engagement.
- These observations helped define the need for a more transparent, verified, and user-centered system in Project Hope.

2.1.2 Internal Discussions (Team Analysis)

- The team conducted internal discussions and brainstorming sessions to better understand both donor and recipient perspectives. In these sessions, team members simulated real-life scenarios such as requesting support, reviewing beneficiary profiles, and making donation decisions.
- These discussions helped identify key user needs, including the importance of verified recipient information, the ability to understand real-life stories behind requests, and the need for a simple and trustworthy donation process. It also highlighted the necessity of a system that supports dignity, privacy, and fairness for all users involved.

2.2 Similar Systems Analysis

The team analyzed existing donation and crowdfunding platforms both locally and globally to understand how similar systems operate. This helped in identifying common features, limitations, and gaps in current solutions. The following systems were mainly observed:

- Karuna.lk
- GoFundMe
- WhyDonate

Our team studied the workflows of these systems, including how donation campaigns are created, how users contribute, and how beneficiary information is displayed. One key observation was that although these platforms enable fundraising, there are still limitations in terms of localized verification, direct donor–recipient interaction, and structured social impact tracking. Project Hope aims to address these gaps by introducing a more transparent and verification-driven system focused on real social needs in Sri Lanka.

2.2.1 Karuna.lk

Karuna.lk is a Sri Lankan charity-based platform that focuses on supporting underprivileged individuals and communities through donations and fundraising campaigns. It allows users to contribute towards various social causes including education, healthcare, and disaster relief.

A. Key Features

- Displays donation campaigns for individuals and social causes
- Allows users to contribute financially to selected causes
- Provides basic descriptions of beneficiary needs
- Focuses on charity-driven community support within Sri Lanka

B. Strengths

- Strong focus on local social welfare and community support
- Simple and easy-to-understand donation process
- Promotes awareness of real-life social issues in Sri Lanka

C. Weaknesses

- Limited transparency regarding detailed verification of beneficiaries
- Lack of real-time updates on donation impact
- Minimal interaction between donors and recipients

D. Gap Analysis and System Motivation

- Project HOPE aims to improve verification of beneficiaries to ensure authenticity
- Introduces structured donor–recipient interaction for better engagement
- Provides more transparent tracking of donation impact and usage

2.2.2 GoFundMe

GoFundMe is a globally recognized crowdfunding platform that allows individuals and organizations to raise funds for personal, medical, educational, and emergency needs.

A. Key Features

- Users can create fundraising campaigns easily
- Supports global donation contributions
- Allows sharing campaigns through social media platforms
- Provides updates from campaign creators

B. Strengths

- Large global user base and high visibility of campaigns
- Easy campaign creation process
- Strong reputation and trust in online fundraising

C. Weaknesses

- Limited strict verification for all campaign types
- High dependency on social sharing for campaign success
- Not specifically designed for localized or country-specific validation systems

D. Gap Analysis and System Motivation

- Project HOPE focuses on verified and validated recipients to ensure trust
- Aims to create a structured system specifically tailored for Sri Lanka
- Introduces a more controlled and responsible donation ecosystem

2.2.3 WhyDonate

WhyDonate is an international crowdfunding platform that enables individuals and non-profit organizations to collect donations for various causes such as healthcare, education, and community development.

A. Key Features

- Supports both individual and organizational fundraising campaigns
- Provides multiple payment gateway options
- Campaign sharing through social media integration
- Donor tracking and basic campaign reporting

B. Strengths

- User-friendly campaign creation interface
- Flexible donation and payment options
- Suitable for both small and large-scale fundraising

C. Weaknesses

- Limited focus on strict beneficiary verification
- Lack of strong regional customization for developing countries
- Transparency of fund utilization varies between campaigns

D. Gap Analysis and System Motivation

- Project Hope introduces a verification-first approach for all recipients
- Ensures transparency in how donations are requested and used
- Focuses on Sri Lanka-specific social and economic conditions

2.4 Requirement Analysis

Through the requirement gathering phase, the team identified the key functionalities and system qualities that must be implemented in Project Hope to ensure a secure, transparent, and user-friendly donation platform.

2.4.1 Functional Requirements

A. User Registration and Login

- Users must be able to register and log into the system using email authentication or third-party services (e.g., Google).
- The system must support different user types such as donors, recipients, and administrators.
- Each user must have a secure authentication process before accessing platform features.

B. Role-Based Access Control

- The system must support multiple user roles with appropriate permissions.
- Donors can browse verified recipient profiles and make donations.
- Recipients can create and manage their assistance requests and update their profiles.
- Admins are responsible for system monitoring, verification, and content management.
- Guest users may have limited access to view general information without performing transactions.

C. Recipient Profile and Request Management

- Recipients must be able to submit assistance requests with relevant details and supporting documents.
- Admins must verify and approve recipient profiles before they are visible to donors.
- Approved profiles must be updated and managed when necessary.

D. Browsing and Donation System

- Donors must be able to browse and search verified recipient profiles.
- Profiles must be categorized based on need types such as education, healthcare, financial support, housing, and urgency level.
- Donors must be able to view detailed stories and make donation decisions accordingly.

E. Donation Management

- Donors must be able to contribute to selected verified recipients.
- The system must record and track all donation activities.
- Recipients must be notified of received support.

F. Communication System

- The platform should allow controlled communication between donors and recipients where necessary.
- All communication should be monitored or regulated by the system to maintain safety and transparency.

G. Admin Management

- Admins must be able to verify recipient submissions and manage user accounts.
- Admins should monitor system activity and handle disputes or issues.
- Admins must ensure that only genuine and verified requests are published on the platform.

H. Transparency and Reporting

- The system should provide transparency regarding donation status and recipient updates.
- Basic reporting features should be available to track system impact and usage.

2.4.2 Non-Functional Requirements

A. Scalability

- The system should be scalable to handle increasing numbers of donors and recipient requests.
- The architecture should support future expansion without major system redesign.

B. Performance

- The system should respond to user actions within 5 seconds under normal load.
- Login and authentication processes should complete within 5 seconds.
- The system should support at least 100 concurrent users without performance degradation.

C. Security

- The system must implement role-based access control (RBAC).
- All users must authenticate before accessing protected features.
- Passwords must be securely stored using encryption techniques.
- Sessions must be securely managed using HTTP-only cookies or secure tokens.
- Donor and recipient data must be protected to ensure privacy and integrity.

D. Availability

- The system should maintain 99.9% uptime during operational periods.
- Planned maintenance should be performed during low-traffic hours.
- System downtime should be minimized to ensure continuous access.

E. Usability

- The interface must be simple and user-friendly for all types of users, including non-technical users.
- Users should be able to navigate, donate, and submit requests with minimal steps.

F. Maintainability

- The system architecture should support easy updates and bug fixes.
- Version control should be used to ensure smooth deployment and maintenance.
- The codebase should be structured for long-term sustainability.

G. Responsiveness

- The platform must be responsive and accessible across desktop, tablet, and mobile devices.
- The UI should adapt properly to different screen sizes without loss of functionality.

3. Design

3.1 Design Diagrams

3.1.1 UML Use Case Diagram

The following UML Use Case Diagram efficiently depicts the interactions that take place between the main actors and the proposed Project Hope system. The system is designed to connect donors with verified recipients in need of assistance while ensuring transparency, security, and proper verification.

Donors are the primary users of the system. They can register and log into the platform, browse verified recipient profiles, and view detailed information about individuals or families requesting support. Donors can make donation contributions to selected cases and track their donation activities through the system. They may also view updates related to the impact of their contributions.

Recipients are individuals or families who request assistance through the platform. They can register, create profiles, and submit requests with necessary supporting information. They are responsible for updating their profiles and providing accurate details to ensure proper verification and approval.

The **Payment Gateway** is responsible for handling secure financial transactions between donors and the system, ensuring that all donations are processed safely and reliably.

The **Admin** oversees the entire system, including verifying recipient applications, managing user accounts, monitoring platform activity, and ensuring that only genuine and approved requests are visible to donors. The admin also handles disputes and maintains overall system integrity.

3.2.2 System UI

(a) Home Page

(b) login page

(c) features page

(d) posts page

(e) post detail page

(f) Add new financier page

(g) New verifier page

The screenshot shows a web browser window with the URL `localhost:5173/admin/new-verifier`. The page features a green sidebar on the left with navigation links: Dashboard, View Profile, User Management, Verification History, Donation Activity, and Statistics. A 'Logout' button is at the bottom of the sidebar. The main content area is titled 'New Verifier Form' and contains several input fields: FIRST NAME (with 'John' entered), LAST NAME (with 'Doe' entered), EMAIL (with 'verifier@example.com' entered), PHONE NUMBER (with '5869241070' entered), and PASSWORD (with masked characters). A green 'CREATE VERIFIER' button is at the bottom of the form. The browser's taskbar at the bottom shows various application icons and the system clock indicating 8:55 PM on 4/28/2026.

(h) recipient dashboard page

The screenshot shows a web browser window with the URL `localhost:5173/recipient-dashboard`. The page has a green sidebar on the left with navigation links: Dashboard, View Profile, My Posts, and Verification. The main content area is titled 'Recipient Dashboard' and displays a grid of posts. Each post card includes a featured image, a title, a category (all are 'FINANCIAL'), and a description. The posts shown are: 'Sample' (description: 'sample'), 'Sample post' (description: 'Give me some meds please !!!!'), 'sample post' (description: 'sample description'), 'sample title' (description: 'sample'), and 'I need finances' (description: 'It is a big help if you provide something'). At the top right of the main area, there are links for 'Posts', 'Features', 'About Us', 'Donate', and a 'Get Started' button. The browser's taskbar at the bottom shows various application icons and the system clock indicating 8:59 PM on 4/28/2026.

(i) recipient verification

The screenshot shows a web browser window with the URL `localhost:5173/recipient/verification`. The page has a green sidebar on the left with links: Dashboard, View Profile, My Posts, and Verification. The main content area is titled "Verification Request" and contains a form with the following fields:

- Province * (dropdown)
- District * (dropdown)
- Divisional Secretarial * (dropdown)
- Grama Niladhari Division * (dropdown)
- Account Number * (text input)
- Employment Category * (dropdown)
- Occupation * (text input)
- Annual Salary (Rs.) * (text input)
- Asset Status * (text input)
- No. of Family Members * (text input)
- Long Term Health Issues (Optional) (text input)
- Verification Document * (text input)
- Choose File no file chosen (button)
- Note: Your information is secure with us and filling out incorrect data may be subjected to permanent banning of the account.
- ☐ I agree with all terms and conditions.
- Request (button)

The browser's taskbar at the bottom shows the time as 9:00 PM on 4/28/2024.

(j) User management (Financier & Verifier)

The screenshot shows a web browser window with the URL `localhost:5173/admin/user-management`. The page has a green sidebar on the left with links: Admin, Dashboard, View Profile, User Management, Verification History, Donation Activity, and Statistics. The main content area is titled "User management (Financier & Verifier)" and contains two tables:

EMAIL	NAME	PHONE	ACTION
scare@gmail.com	scare crow	0718639759	+ Add Verifier

EMAIL	NAME	PHONE	ACTION
superman@gmail.com	super man	0714567896	+ Add Financier

The browser's taskbar at the bottom shows the time as 8:55 PM on 4/28/2024.

(k) Admin management

The screenshot shows the 'Admins' management page in a web application. The page has a green sidebar with navigation links: Dashboard, Manage Users, Verification History, Donation Activity, and Statistics. The main content area is titled 'Admins' and includes a '+ Add New Admin' button. Below this is a table listing four administrators with columns for First Name, Last Name, Email, Phone Number, and Actions. Each row has a red 'Delete' button.

First Name	Last Name	Email	Phone Number	Actions
string	string	user@example.com	3265611515	<button>Delete</button>
string	string	flash@gmail.com	3364847918	<button>Delete</button>
arrow	flash	arrow@gmail.com	0718639759	<button>Delete</button>
testArrow	starling	testarrow@gmail.com	0718639759	<button>Delete</button>

(l) about us page

The screenshot shows the 'About Us' page of a web application. The page features a green header with a 'Hey There!' greeting and a 'DONATE' button. Below this is a section titled 'Our Vision' with a paragraph of text. The main section is titled 'Meet Our Founders' and displays eight founder profiles in a grid. Each profile includes a circular avatar, a name, and a title.

Hey There!

At Project Hope, we believe that no one should struggle alone. Everyday millions of people face financial hardships that could be eased with a little help from someone who cares. Our mission is to bridge that gap—connecting compassionate donors with individuals and communities in need.

Our Vision

We are a dedicated team committed to building a transparent, trustworthy, and user-friendly platform where kindness meets opportunity. Whether someone is raising funds for emergency medical care, education, food, shelter, or community support, our platform empowers them to prove their story and receive support from generous donors worldwide.

4. Meeting Details

Meeting Date: 2 nd January 2026
Meeting time: 5.30 p.m.
Number of participants: 7
Meeting Date: 25 th January 2026
Meeting time: 5.00 p.m.
Number of participants: 8
Meeting Date: 20 th March 2026
Meeting time: 9.00 p.m.
Number of participants: 8
Meeting Date: 28 th March 2026
Meeting time: 10.30 p.m.
Number of participants: 6
Meeting Date: 4 th April 2026
Meeting time: 10.00 p.m.
Number of participants: 7
Meeting Date: 20 th April 2026
Meeting time: 8.40 p.m.
Number of participants: 8

5. Work planned until next meeting

- Integrate payment gateway. (stripe)
- Finalise the API documentation
- Finish unfinished component development. (Financier pages, verifier pages, some admin pages)
- Enhance current UI. (For some pages, styling needs fixing)
- Develop remaining backend APIs.
- Start system-level testing.

6. Conclusion

The proposed **Project Hope centralized donation and beneficiary support platform** aims to provide a secure, transparent, and user-friendly digital environment for both donors and recipients across Sri Lanka. By integrating recipient verification, profile management, donation facilitation, and transparent communication within a single platform, the system addresses a critical challenge often faced in charitable giving: the lack of trust, transparency, and direct connection between donors and genuine beneficiaries.

The platform ensures secure access control and role-based functionality through clearly defined user roles, including donors, recipients, and administrators. Through automation of key processes such as recipient verification, profile approval, donation tracking, communication management, and administrative monitoring, the system minimizes manual effort and reduces the risks of errors, misuse, and fraudulent activity often encountered in traditional charity systems.

This project aims to deliver a scalable, centralized web-based solution that enhances the process of responsible giving while ensuring that assistance reaches verified individuals and families in genuine need. The platform creates equal opportunities for underprivileged communities to gain visibility and support, while empowering donors to make informed and meaningful contributions through a trusted digital ecosystem.

Supervisor's Comments		
Student has done	☐ More than ☐ Sufficient ☐ Not ☐ No	work.
Student is progressing	☐ Well ☐ Sufficiently ☐ Not Enough	In the project.
